

A Blueprint for a Predictable Future

The BJ Attao Strategy for a Resilient and Prosperous CNMI

CNMI is at a Crossroads

Our current path is unsustainable. We face a series of interconnected challenges that require more than temporary fixes.

The Choice Before Us: A Patch or a Blueprint?

The Reactive Approach (The Patch)

This approach relies on temporary subsidies, waits for tourism to recover, blames the past for current problems, and appeals for external aid. It's like constantly placing buckets under a leaky roof.

The Structural Solution (The Blueprint)

This approach builds new, permanent revenue streams, creates structural cost reductions, legally secures funds for their intended purpose, and fosters long-term self-sufficiency. It's about redesigning the roof and drainage system to solve the problem for good.

A Five-Pillar Strategy for Structural Reform

Our blueprint is built on five interconnected pillars designed **to create a self-sufficient and resilient CNMI.**

Pillar 1 | Blue Economy 2026

The Goal: To transform our vast

To transform our vast marine territory from a scenic backdrop into a primary economic engine.

Key Actions:

Sustainable Fishery Expansion: Develop a modern, responsible fishing industry.

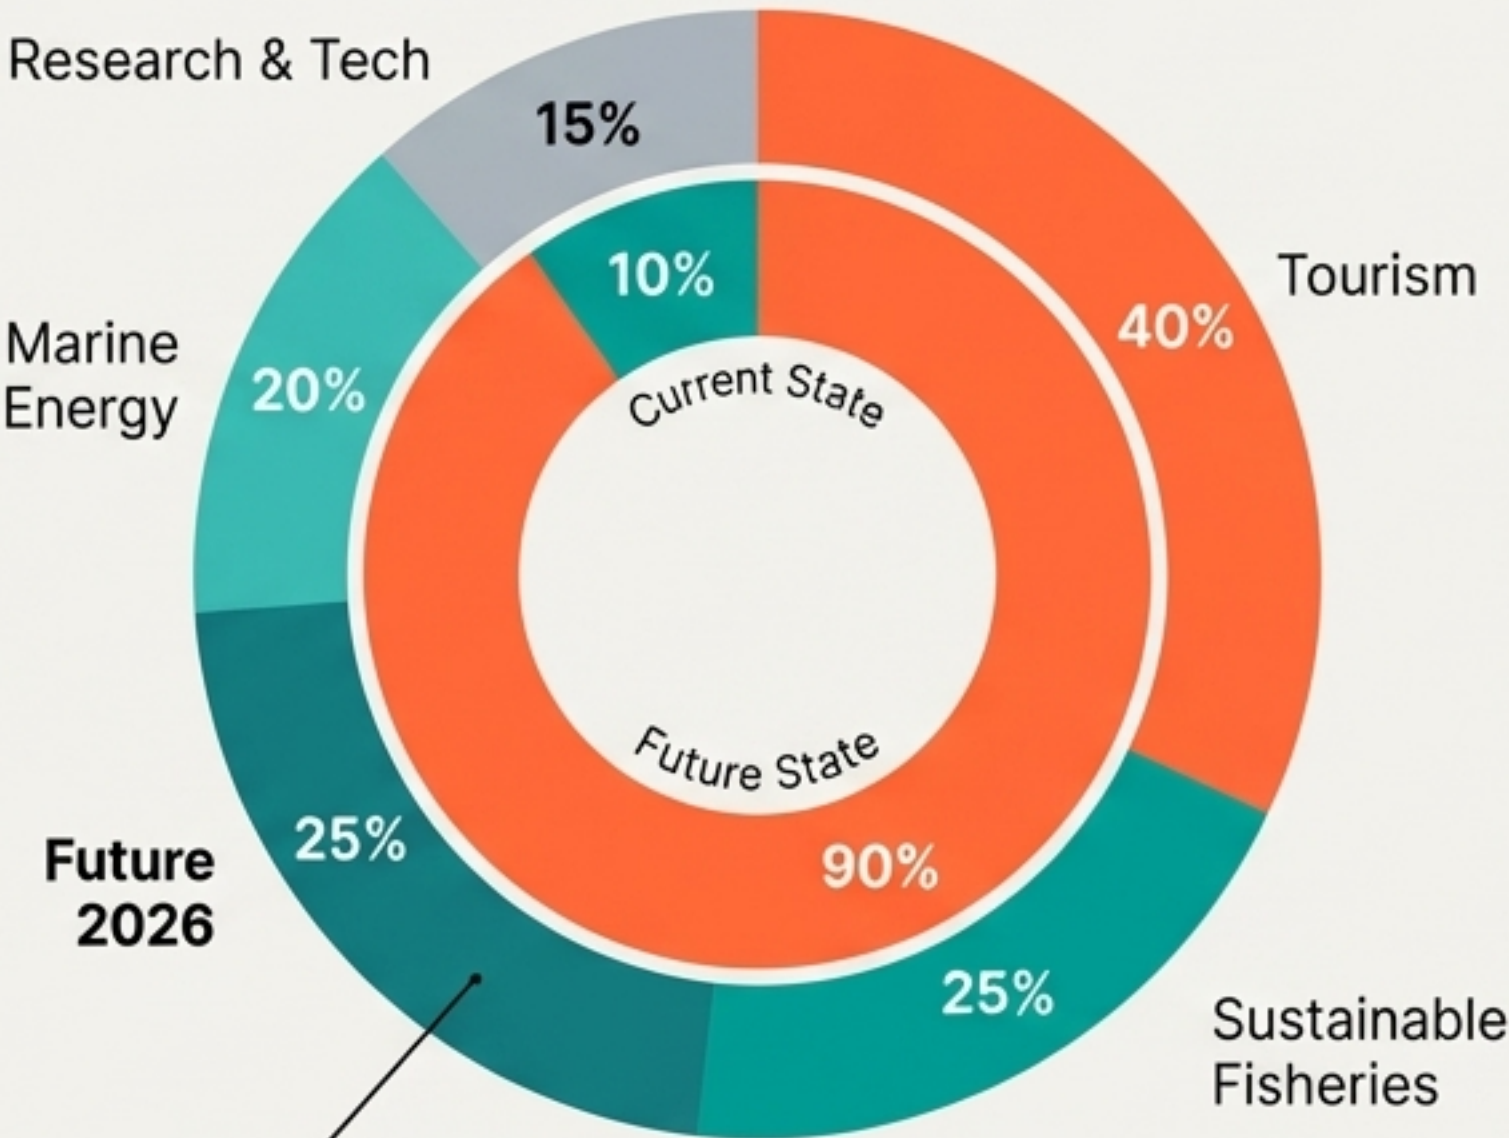

Marine Energy Development: Harness ocean resources for renewable power.

Deep-Sea Research Hubs: Attract international scientific institutions and investment.

Projected Economic Diversification

Validated by AI analysis of marine resource data.

The Attao Difference: While others focus solely on waiting for tourists to return, we will build a diversified, marine industry-based economy that creates prosperity year-round.

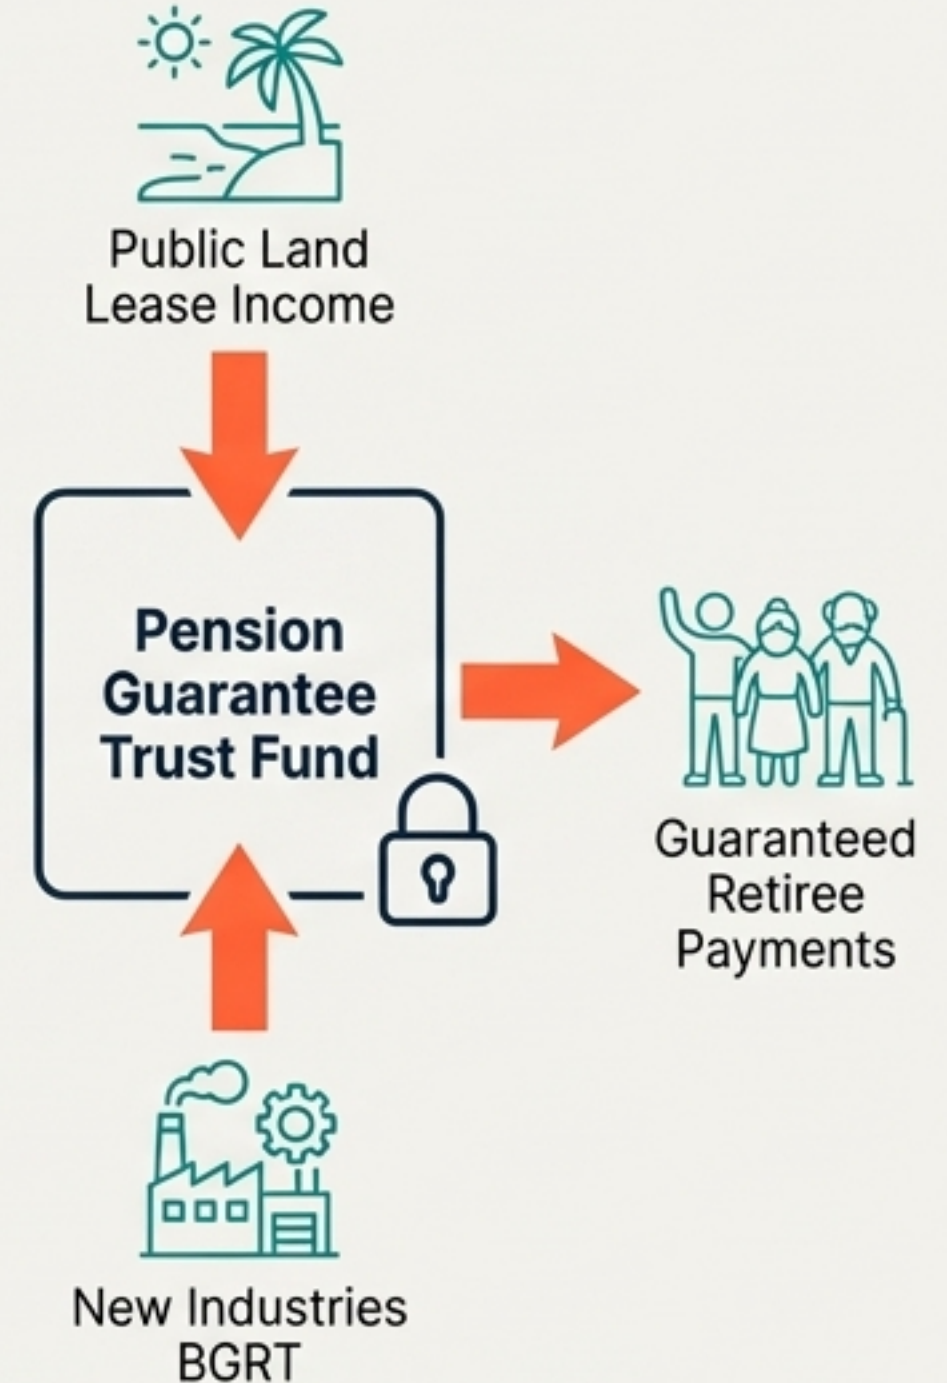

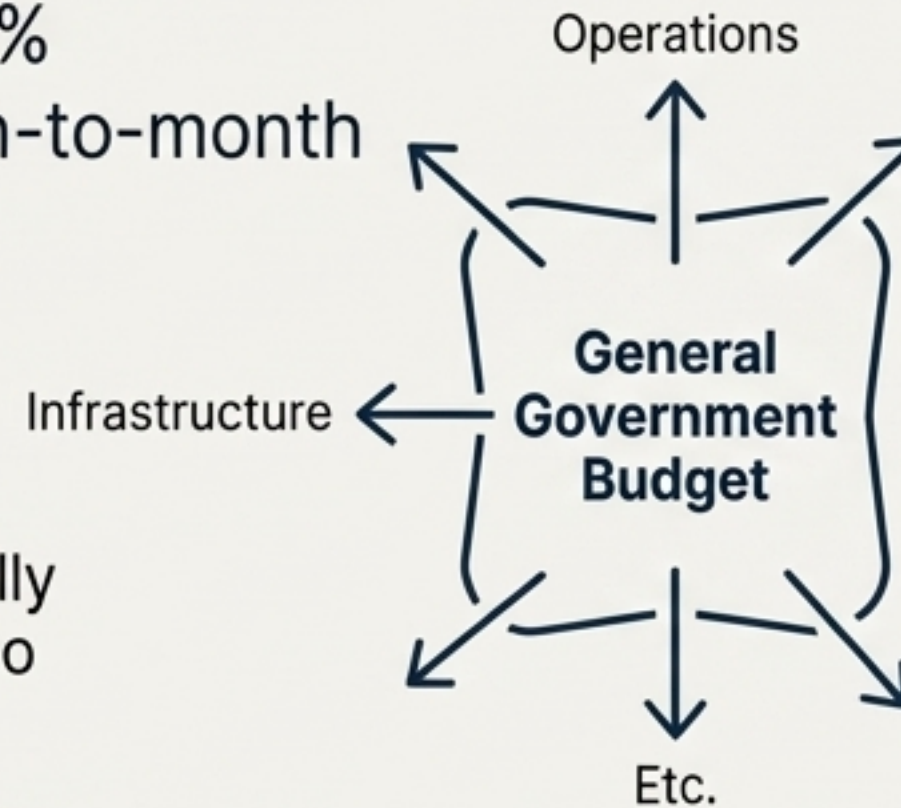

Pillar 2 | The Pension 25% Guarantee Trust Fund

The Goal: To transition the uncertain 25% voluntary pension payment from a month-to-month hope into a legally guaranteed certainty.

Key Actions:

Establish a Legally Isolated Trust Fund: Structurally separate pension funds from the general budget so they can never be diverted.

Secure Dedicated Revenue Streams: The fund will be automatically financed by fixed sources, including Public land lease income and a portion of Business Gross Revenue Taxes (BGRT) from new industries.

The Attao Difference: Instead of blaming past administrations for shortfalls, we offer a specific, expert-level budget solution that legally secures the funds our retirees have earned. It's not a promise; it's a mechanism.

Pillar 3 | Marianas Jobs Now 2029

The Goal: To build “labor independence” by upskilling our local workforce in preparation for the end of the CW-1 visa system in 2029.

Key Actions

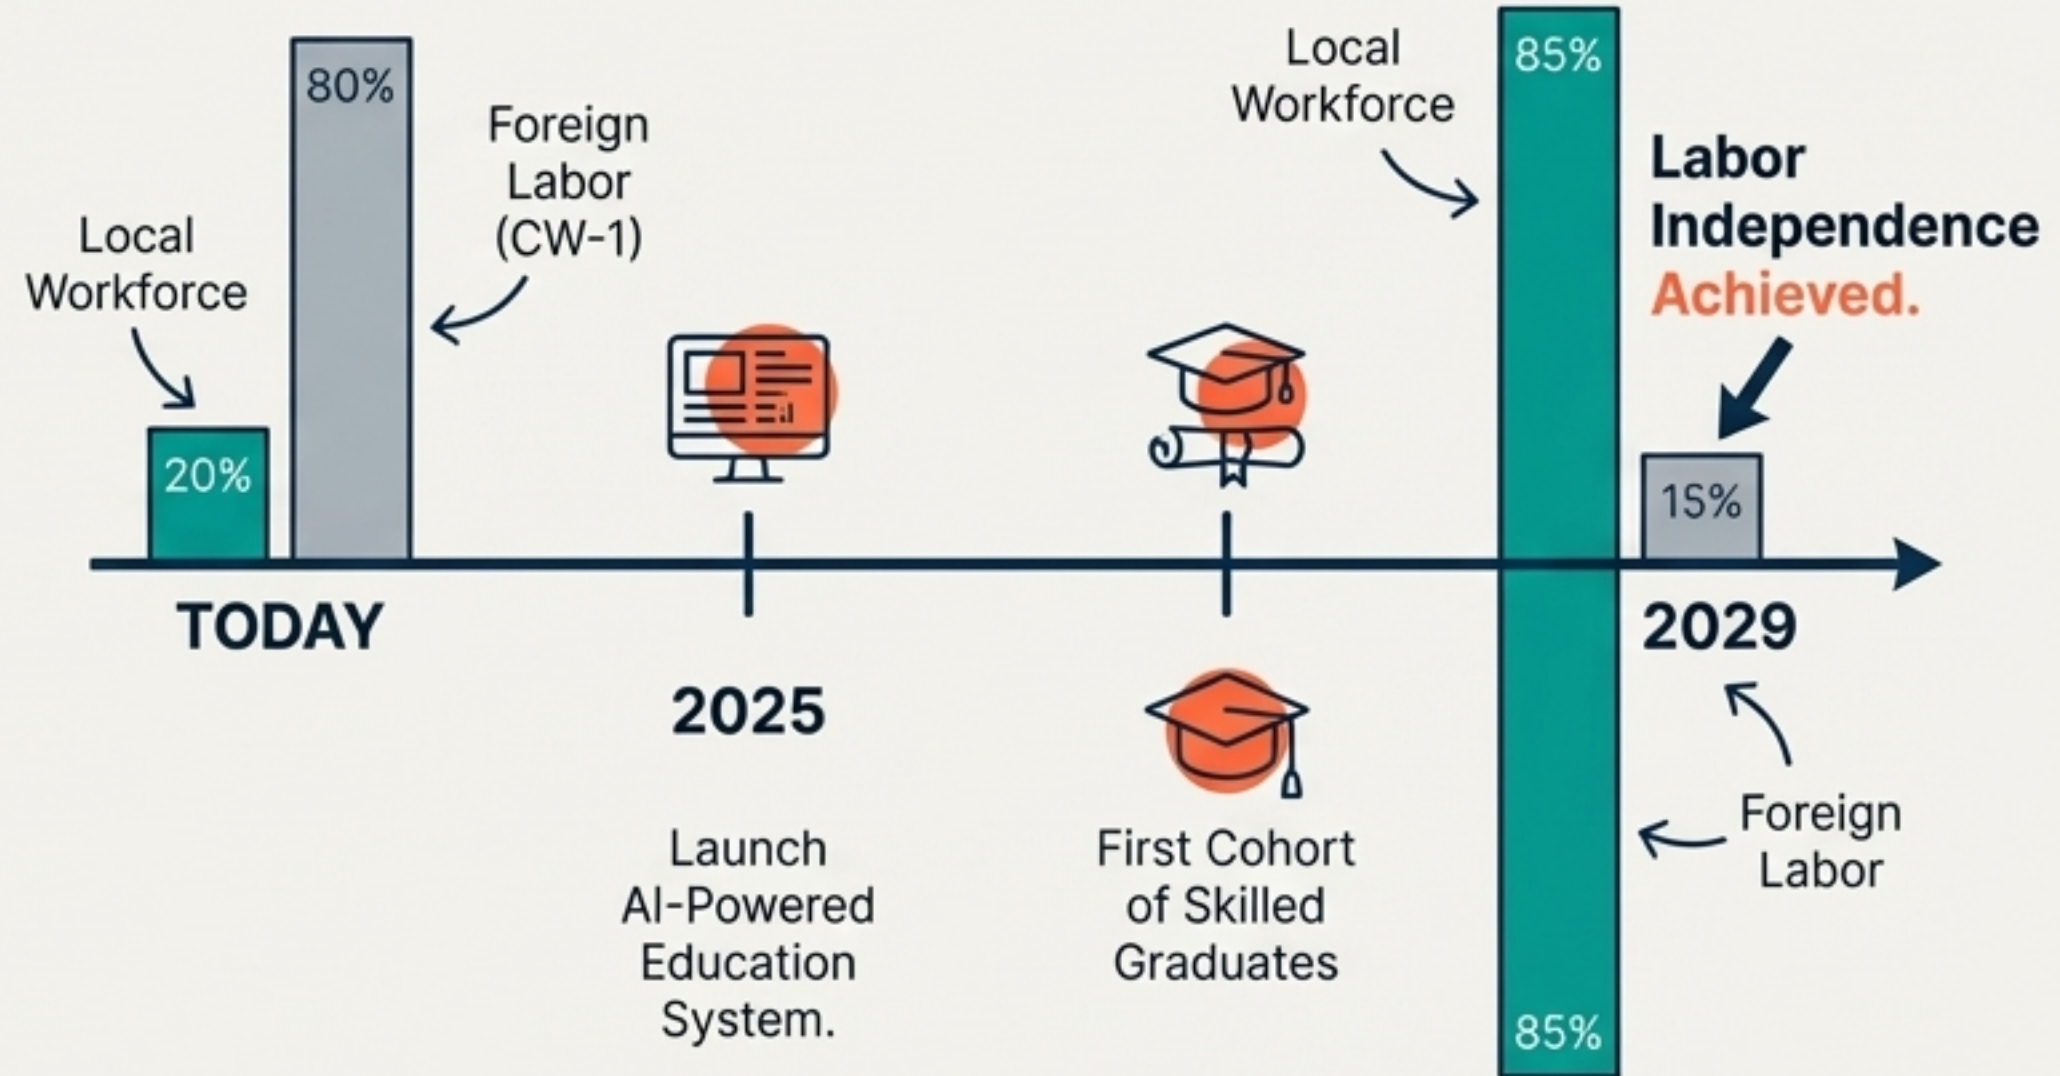

AI-Powered Education System:

Provide accessible training in high-demand digital skills and advanced tourism specialties.

Develop a Skilled Local Talent Pool:

Proactively cultivate local talent to reduce reliance on foreign labor and ensure our businesses can thrive.

The Attao Difference: The passive approach is to appeal to the federal government for visa extensions. Our proactive strategy is to empower our own people, creating a self-sufficient labor market that controls its own destiny.

Pillar 4 | Energy Independence

The Goal: A permanent 30% reduction in household and business electricity bills through structural energy reform.

Key Actions

Full-Scale Renewable Infrastructure: Introduce Solar Power and Battery Energy Storage Systems (BESS), starting with public facilities to stabilize the grid.

Residential Solar Program: Implement generous subsidies and accessible installment plans to help families install their own home solar systems.

The Attao Difference: One-time checks to help pay a single high power bill are temporary relief. Our plan provides a permanent reduction in fixed living expenses, which means a real, lasting increase in the income of middle-class families and small businesses.

BEFORE

AFTER

Pillar 5 | A New Standard of Transparent Governance

Goal: To prove integrity and accountability with technology, making government actions and spending completely visible to the public.

Key Actions

Real-Time Public Dashboards: Launch a platform for citizens to track government budget execution and progress on all policy pledges in real-time.

Open Data Initiatives: Make government data accessible to foster public trust and data-driven decision-making.

The Attao Difference

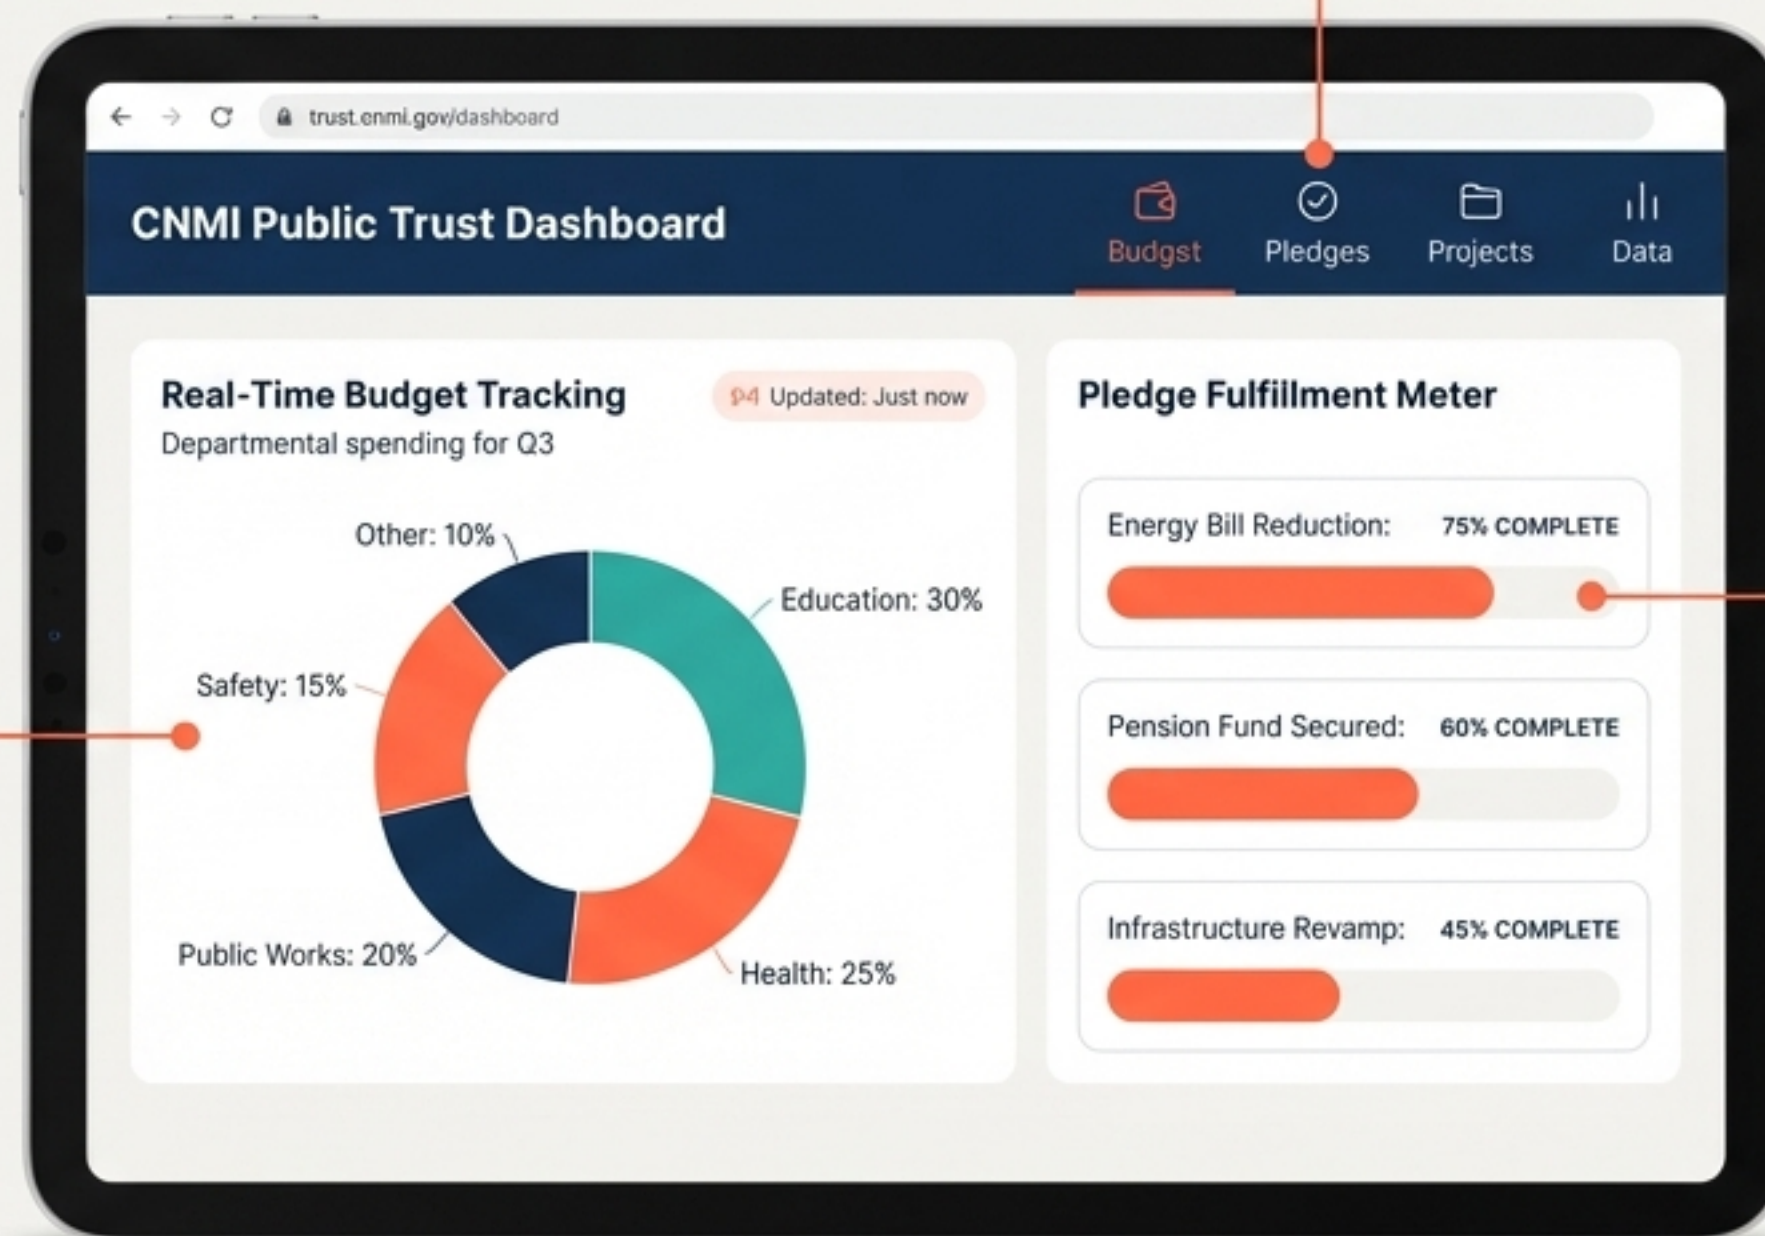

In an era of corruption scandals and opaque administration, we will not just promise ethics—we will build a system where transparency is technologically guaranteed.

Proof of Integrity: The AI Transparency Dashboard

Proving integrity with technology, not just words. Every citizen can become a watchdog.

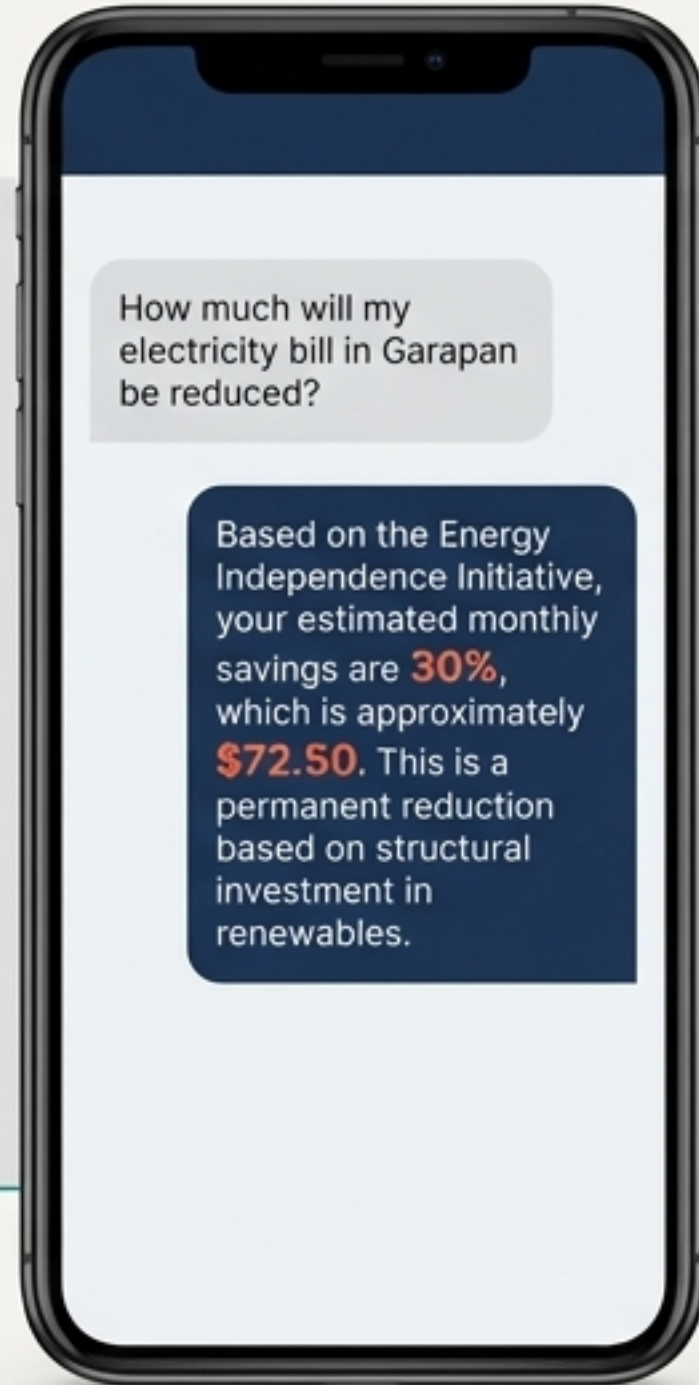

Real-Time Budget Tracking

Accessible to All Citizens

Pledge Fulfillment Meter

Making Policy Personal: AI Tools for Citizens

The Participatory AI Chatbot

AI-Powered Data Visualization

An Inclusive Conversation: Reaching Every Community

A truly representative government must speak the language of its people. We are using technology to ensure every voice is heard and every citizen is informed.

AI Policy Explanations in Tagalog

Providing detailed, accessible information on the CW-1 visa policy and labor environment improvements directly to the Filipino community in their native language.

AI Policy Explanations in Chamorro

Offering clear, audible explanations of the pension policy changes, ensuring our native elders fully understand the security and benefits they have earned.

This ensures crucial policies are understood by the communities they impact most.

The Blueprint Synthesized: From Dependency to Self-Sufficiency

**Blue Economy
2026**

**Pension
Trust Fund**

**Marianas
Jobs Now**

**Energy
Independence**

**Transparent
Governance**

**Economic
Resilience**

**Security for
Retirees**

**Labor
Independence**

**Lower Cost
of Living**

**Unprecedented
Public Trust**

**The choice is not between candidates.
It's between repeating the past and
building the future. A future that is
resilient, prosperous, and predictable.
A future built on a solid foundation.**
